**EXAMINER'S AMENDMENT**

In response to applicant's amendment filed 5/3/2007, claim 50 has been amended.

In response to applicant's election filed 5/3/2007, claims 1-58 are pending with claims 30-44 and 52-58 having been withdrawn without traverse.

The information disclosure statements filed 10/10/2006 and 11/20/2006 have been considered. See the attached initialed copies.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- This application is in condition for allowance except for the presence of claims 30-44 and 52-58 directed to a homogeneous medium waveguide non-elected without traverse. Accordingly, claims 30-44 and 52-58 have been cancelled.
- In claim 48 line 1 "(Withdrawn)" has been amended to -(Previously presented)--. See Interview Summary for explanation of change.

The following is an examiner's statement of reasons for allowance:

Re claims 1-20, 45-51, the cited prior art fail to teach or fairly suggest a photonic crystal waveguide comprising: a core formed of a photonic crystal having periodicity having a first direction and propagating an electromagnetic wave in a second direction perpendicular to the first direction, the core comprising a photonic band structure having a Brillouin zone boundary and a photonic band thereon comprising a propagation mode in which the electromagnetic wave is propagated a homogeneous medium cladding having a refractive index  $n_s$ ; and **the core further comprising a side face parallel to the first direction, the side face in contact with the homogeneous medium cladding, the side face satisfying the condition:**

$$\lambda_0/n_s > a\lambda/(\lambda^2/4 + a^2)^{0.5}$$

**where  $\lambda_0$  denotes a wavelength of the electromagnetic wave in a vacuum,  $a$  denotes a period of the photonic crystal, and  $\lambda$  denotes a period of the wave propagated through the core in the second direction perpendicular to the first direction.**

Re claims 21-29, the cited prior art fail to teach or fairly suggest a photonic crystal waveguide comprising: a core formed of a photonic crystal having periodicity in a first direction and propagating an electromagnetic wave in a second direction perpendicular to the first direction, the core comprising a photonic band structure having a Brillouin zone center line and a high-order photonic band thereon comprising a propagation mode in which the electromagnetic wave is propagated a homogeneous medium cladding having a refractive index  $n_s$ , and **the core comprising a side face parallel to**

**the first direction in contact with the homogeneous medium cladding the side face satisfying the condition:**

$$\lambda_0/n_s - \lambda > 0$$

**where  $\lambda_0$  denotes a wavelength of the electromagnetic wave in vacuum,  $a$  denotes a period of the photonic crystal, and  $\lambda$  denotes a period of the wave propagated through the core in the second direction perpendicular to the first direction.**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
